2825 Airview Boulevard  
Kalamazoo, MI 49002

Dear Recruiting Department,

I would greatly appreciate an opportunity to pursue a career with a leader in the field of medical technology like Stryker. I am confident that my biomedical engineering degree and work experience provides me with a good foundation, while my passion to excel in the field of biomedical design will enable me to become a strong contributor to your extensive history of medical innovation.

I am a recent graduate from the North Carolina State University biomedical engineering program. In this program my concentration was bioinstrumentation, which allowed me to explore electrical engineering as it relates to the medical field.

Throughout my education I completed many courses that gave me the skills and tools needed to succeed as a professional engineer. The most important of these was a lean six sigma course. In this course I learned how to utilize objective measures to confidently make important decisions regarding team projects. For example, my senior design project team performed a failure modes, effects, and criticality analysis so that we could design our product with the confidence that our consumers would receive a functioning, high quality product.

While my education provided me with the tools, my professional experience taught me how to use them effectively in a professional environment. I was entrusted with handling multiple projects on my own which taught me valuable lessons such as listening to important details, relaying important details to others, and knowing who to collaborate with. Those are skills not often learned in school, and they led me to be more adaptable and resourceful in my path to success.

I am confident that all of these skills would make me a versatile addition to your team. I would love an opportunity to work for Stryker, and I look forward to hearing back from you.

Thank you for your consideration,

Kevin Ferretti
